# The Clipping Army Model: How a 22-Year-Old Built a \$50-100K/Month Community Funnel

---

A complete funnel reverse-engineering with real numbers, tech stack, and implementation steps.

By PRINTMAXX

---

## About This Teardown

This is not theory. This is a complete reverse-engineering of a real community funnel generating \$50-100K+ per month.

The subject: Clavvicular, a looksmaxxing creator who built a distribution engine using 750+ clippers, a Skool community, and a \$170/month tech stack. His infrastructure cost is \$170/month. His revenue is \$50-100K+/month. That is a 99.8% margin.

Every number in this document comes from real analysis: SimilarWeb traffic data, Skool member counts, visible pricing, TypeForm application structure, and VSSL page teardown.

At the end of this teardown, you will have a replicable framework for building the same funnel in any niche.

---

## TL;DR (The 60-Second Version)

The funnel has 4 layers:

1. Distribution: 750+ clipping accounts repost his content. They each have their own audiences. Combined reach dwarfs his 237K Instagram and 700K TikTok.
2. Conversion: Traffic hits a VSSL page on Framer (43K visits/month). Video follows hook-agitate-mechanism-close structure.
3. Community: \$49/month Skool community with 1,400 members. Content gated behind timed unlocks (7, 10, 14 days). Also runs a \$25/month female edition with free trial to rebill.
4. Ascension: High-ticket coaching at \$3-5K via TypeForm application. The community IS the qualifying funnel for coaching.

The most replicable patterns: clipping army as distribution engine, unique mechanism naming, free trial to rebill community model, timed content unlocks for churn prevention, and the community-to-high-ticket ascension ladder.

---

## Part 1: The Creator Profile

| Attribute       | Detail                               |
|-----------------|--------------------------------------|
| Name            | Clavvicular (also: Clav, Flatline)   |
| Niche           | Looksmaxxing / Male aesthetics / ..  |
| TikTok          | 700K followers (primary content p..  |
| Instagram       | 237K followers (clip repurposing)    |
| Twitch          | Present but low activity (19+ day..  |
| Blowup timing   | Q4 2025                              |
| Brand story     | Personal transformation / visible..  |
| Skool community | 1,400 members at \$49/month          |
| Female edition  | 115 members at \$25/month with fre.. |
| High-ticket     | \$3-5K coaching via TypeForm appli.. |

Core brand thesis: Transformation story. He went through a visible physical change and packages that experience as a protocol others can follow. The before/after IS the product. This works in any niche where visible results exist.

## Part 2: The Traffic Architecture

### Platform Breakdown

| Platform           | Role in Funnel             | Followers                  | Activity              |
|--------------------|----------------------------|----------------------------|-----------------------|
| TikTok             | Primary content creation   | 700K                       | Active                |
| Instagram          | Clip repurposing           | 237K                       | Active (via clippers) |
| Twitch             | Live engagement, donations | Unknown                    | Low                   |
| Clipping pages     | PRIMARY DISTRIBUTION       | 70K+ per page (many pages) | High                  |
| VSSL page (Framer) | Conversion                 | 43K visits/month           | Always on             |
| Skool              | Monetization + community   | 1,400 members              | Active                |

### Traffic Sources to VSSL Page

The VSSL landing page pulls 43K visits/month (SimilarWeb, December data). Traffic mix: direct, social (TikTok, Instagram, clipping pages), search, referral.

The critical insight: most traffic comes from clipping pages, not his own accounts.

### The Clipping Army (This Is the Key)

This is the single most important distribution mechanism in the entire funnel. This is what makes the whole thing work.

How it works:

1. Clavvicular creates content on TikTok and Instagram
2. A separate clipping community (NOT on Skool) repackages and distributes his content
3. 750 members in the clipping group

4. Multiple clipping pages have 70K+ followers each
5. Visible budget of \$1,700 for the clipping community (likely higher)
6. Clipping pages push viewers to his profile or Skool via affiliate links

Why this matters: The analyst who studied this funnel noted they had "almost never seen his actual main Instagram or main TikTok post." Nearly all exposure comes through third-party clipping accounts. People encountering the content often think the clipping page IS Clavvicular.

This creates perceived omnipresence far exceeding what 237K on Instagram would normally generate.

This is the exact Andrew Tate distribution playbook applied to a different niche.

| Clipping Army Metric | Value                               |
|----------------------|-------------------------------------|
| Community size       | 750 members                         |
| Platform             | Separate from Skool (dedicated cl.. |
| Top clipper pages    | 70K+ followers each                 |
| Visible budget       | \$1,700                             |
| Compensation         | Per-clip payment or affiliate rev.. |

## Your Own Accounts vs. Clipping Army

| Your Own Accounts                   | Clipping Army                       |
|-------------------------------------|-------------------------------------|
| Algorithm limits your reach         | 750 accounts each getting their o.. |
| One perspective, one edit style     | Hundreds of unique edits and hook.. |
| You look self-promotional           | Third-party endorsement effect      |
| 1 post = 1 chance at virality       | 1 clip = 750 chances at virality    |
| Audience thinks "he's promoting h.. | Audience thinks "everyone's talki.. |

Cost comparison: \$1,700/month in TikTok ads buys maybe 500K impressions. 750 clipping accounts posting daily could generate 10x+ that reach organically. The clipping army is cheaper than ads and builds real pages with real followers that compound over time.

## Part 3: The Monetization Stack (Full Revenue Ladder)

### Layer 1: Skool Community (\$49/month)

| Metric              | Value                               |
|---------------------|-------------------------------------|
| Members             | 1,400                               |
| Price               | \$49/month                          |
| Max theoretical MRR | \$68,600                            |
| Realistic MRR       | Lower (grandfathered/free members.. |
| Platform            | Skool.com (\$99/month to run)       |
| Engagement          | Low (18-20 online out of 1,400)     |

Content gating structure inside Skool:

| Gate Type       | Release Timing   | Purpose                             |
|-----------------|------------------|-------------------------------------|
| Module 1        | Immediate        | Onboard + quick win                 |
| Module 2        | 7 days           | Retention past first week           |
| Module 3        | 10 days          | Deeper commitment                   |
| Module 4        | 14 days          | Within first billing cycle, push .. |
| Level 2 content | Engagement-based | Reward active members               |

The 14-day longest gate is deliberate. It falls inside the first \$49 billing cycle. By the time the best content unlocks, the user has already renewed or is deep enough to not cancel.

## Layer 2: Female Edition (\$25/month with Free Trial)

| Metric    | Value                                |
|-----------|--------------------------------------|
| Members   | 115                                  |
| Price     | Free 7-day trial, then \$25/month .. |
| MRR       | ~\$2,875 (if all rebilling)          |
| Targeting | Women (different VSSL, different ..  |
| Admin     | Separate administrator (not Clav'..  |

Free trial to rebill model insight: This solves the "free vs paid community" debate. Free trial gets adoption. Rebill gets revenue. Sam Ovens / consulting.com used the same model at higher ticket (\$2K chunked into \$495 payments).

Revenue comparison for a 1,000-member community:

| Model                   | Join Rate             | Paying Members      | MRR               |
|-------------------------|-----------------------|---------------------|-------------------|
| Free forever            | High                  | 0                   | \$0               |
| Paid \$49/month upfront | Low (100-200)         | 100-200             | \$4,900-\$9,800   |
| Free trial, \$49 rebill | Medium-High (600-800) | 400-600 after churn | \$19,600-\$29,400 |

The free trial model wins because it maximizes both the funnel mouth (adoption) and revenue (rebill captures serious users).

## Layer 3: High-Ticket Coaching (\$3-5K)

| Metric        | Value                                 |
|---------------|---------------------------------------|
| Price         | \$3,000-\$5,000 per engagement        |
| Application   | TypeForm survey                       |
| Qualification | Budget question asks "\$3K-\$5K" an.. |
| Delivery      | Personalized protocols                |
| Funnel source | Ascension from Skool community me..   |

This is the real money. The \$49/month community is lead generation for \$3-5K coaching. The ascension path: free content on TikTok/IG attracts them, clipping pages amplify reach, VSSL converts to Skool, timed content unlocks nurture for 14 days, then high-ticket coaching application becomes the next step.

## Layer 4: Auxiliary Revenue

| Stream                   | Mechanism                            |
|--------------------------|--------------------------------------|
| Twitch donations         | "Donate to talk" feature during s..  |
| Affiliate program        | Skool members share affiliate lin..  |
| Transformation challenge | \$500 prize for best before/after .. |

## Revenue Estimates

| Scenario                            | Monthly Revenue   |
|-------------------------------------|-------------------|
| Conservative (Skool partially pai.. | \$50,000-\$60,000 |
| Mid-range (most Skool members pay.. | \$70,000-\$80,000 |
| Bull case (full Skool + active co.. | \$100,000+        |

## Part 4: The VSSL (Video Sales Letter) Breakdown

### Tech Stack

| Component    | Tool      | Monthly Cost    |
|--------------|-----------|-----------------|
| Landing page | Framer    | ~\$20           |
| Video player | Wistia    | ~\$19 (starter) |
| Community    | Skool.com | \$99            |
| Applications | TypeForm  | Free-\$29       |
| Total        |           | ~\$170          |

Against \$50-100K+/month revenue, this is a 99.8%+ margin business on infrastructure alone.

### VSSL Script Framework (The 9-Step Structure)

This is the exact sequence used in the video sales letter. Study this structure. It works for any niche.

#### Step 1: Hook (Pain State)

Opens with the core insecurity of the target audience. Identifies the emotional state they're in. "Tired of [painful experience]. Tired of [second painful experience]. Tired of watching other [people who have what they want]."

#### Step 2: Agitate (Time Pressure)

Attacks the window-closing fear. Every day you wait is a day lost. For younger demographics, this hits especially hard because of the urgency of formative years. For older demographics, reframe around opportunity cost.

#### Step 3: Social Proof (Numbers)

"Join [number]+ like-minded [people]" creates community proof. Positions joining as the default action of serious people. The number must be real and ideally round enough to scan instantly.

#### Step 4: Mechanism Flip (THE KEY MOVE)

Introduces a new mechanism name that is NOT the old category name. Does NOT position it as "better [old thing]." Positions the old approach as basic and outdated. The new mechanism is the advanced, insider

knowledge approach.

This is the most important copywriting move in the entire funnel. See section on Unique Mechanism Naming below.

#### Step 5: Authority Building

Uses technical or specialized terminology. For any niche, identify the "smart words" that make people perceive expertise. Medical terms for health. Financial terms for money. Technical terms for tech.

#### Step 6: Borrowed Authority

Shows association with high-profile figures. Clips with known names. Appearances on podcasts. Testimonials from recognized people. Association = credibility transfer.

#### Step 7: Before/After Proof

Visual evidence of the transformation. Draggable before/after photo sliders on the landing page. The more specific and verifiable these transformations are, the better they convert.

#### Step 8: Urgency Close

"Spots are limited" + emotional urgency: "every day you wait you're living as a version of yourself you're [disappointed in / not reaching your potential / leaving money on the table]."

#### Step 9: CTA

Single direction. Either Skool join link or TypeForm application. Never both. Never multiple options. One button. One action.

### Landing Page Features

- Autoplay on mute (standard for VSSL pages in 2026)
- Before/after photo sliders (interactive, draggable)
- Social proof counter ("1,000+ students")
- Single CTA button (no navigation, no menu, no distractions)
- Mobile-optimized (60-80% of social traffic is mobile)
- Load time under 3 seconds

---

## Part 5: Strategic Frameworks Worth Stealing

### Framework 1: Unique Mechanism Naming

This is the most powerful copywriting concept in this entire teardown.

The problem: If someone already tried "[your category]" and it didn't work, offering them "better [your category]" or "[your category] 2.0" will not convert. They already have a mental model of [your category] = basic tips that didn't transform them.

The solution: Create a completely new mechanism name. Position it as fundamentally different from the old

approach. Same outcome, entirely new framing.

Application to different niches:

| Niche            | Old Mechanism (Don't Use) | New Mechanism Name (Use This)       |
|------------------|---------------------------|-------------------------------------|
| Prayer/Faith     | "Prayer routine"          | "Divine Protocol" or "Covenant Sy.. |
| Fitness          | "Workout plan"            | "Metabolic Override" or "Physical.. |
| Productivity     | "Time management"         | "Output Architecture" or "Executi.. |
| Women's wellness | "Self-care routine"       | "Radiance Protocol" or "Inner Ali.. |
| Finance          | "Budgeting"               | "Capital Genesis" or "Wealth Arch.. |
| Sales            | "Cold outreach"           | "Pipeline Architecture" or "Reven.. |
| Dating           | "Confidence tips"         | "Social Calibration" or "Presence.. |

The principle: same outcome, completely new language. New mechanism = new buying decision. Old mechanism = "I already tried that."

## Framework 2: Free Trial to Rebill

The decision tree for community pricing:

"Should I make my community free or paid?"

ANSWER: Free 7-day trial with rebill.

Why:

- Free trial gets adoption (no friction to join)
- People who join free trials feel obligation to explore
- After 7 days of content consumption, they're invested
- \$25-49/month rebill captures those who got value
- Non-payers churn naturally (no hard feelings)

## Framework 3: Content Gating for Churn Prevention

Gate your best content behind timed unlocks:

Day 0: Basic modules (enough to feel they got value)

Day 7: Module 2 unlocks (they're already 1 week in)

Day 10: Module 3 unlocks (past the "should I cancel?" window)

Day 14: Module 4 unlocks (best content, within first billing cycle)

If the best content unlocks at day 14, and billing is on day 30, the user has 16 days to consume premium content before deciding to renew. They feel they just got access to the real stuff. Canceling feels like quitting right when things got good.

## Framework 4: The Transformation Challenge as Marketing Flywheel

Run a transformation challenge with a prize (\$500). Members compete for the best before/after. Benefits:

1. Generates authentic before/after content (your best ad creative)
2. Increases engagement (people participate and vote)

3. Creates social proof (winners showcase transformation)
4. Costs \$500 but generates thousands in UGC value
5. Participants become your most loyal advocates
6. Content from challenges can be used in VSSL, ads, and social

## Part 6: Identified Weaknesses (What Not to Do)

These are real vulnerabilities identified in the analysis. Each is a lesson.

| # | Weakness                            | Impact                              | The Lesson                          |
|---|-------------------------------------|-------------------------------------|-------------------------------------|
| 1 | No onboarding flow                  | Confused new members, no clear fi.. | Always have a "Start Here" module.. |
| 2 | Confusing course structure          | Members don't know what to do next  | Number modules sequentially. Line.. |
| 3 | No quick-win first module           | Members don't get early result, i.. | Find the ONE thing that works fas.. |
| 4 | Mixed gating logic                  | Time gates + level gates + engage.. | Pick ONE gating system and commit   |
| 5 | AI images instead of real transfo.. | Diminishes credibility              | Use real member results. Authenti.. |
| 6 | No compliance/disclaimers           | Legal risk                          | Add disclaimers. Terms of service.. |
| 7 | Mismatched social proof numbers     | "1,000+ students" vs "dozens" in .. | Align ALL numbers across ALL touc.. |
| 8 | Low community engagement            | 18-20 out of 1,400 = 1.3% engagem.. | Daily challenges, gamification, e.. |
| 9 | No personalized welcome video       | Generic Skool default plays         | Record a custom welcome video. 2 .. |

## Part 7: Tech Stack Replication Guide

### Full Stack Cost

| Tool              | Purpose                           | Monthly Cost |
|-------------------|-----------------------------------|--------------|
| Skool.com         | Community + courses               | \$99         |
| Framer            | VSSL landing page                 | \$20         |
| Wistia            | Video hosting with autoplay       | \$19         |
| TypeForm          | High-ticket applications          | \$0-29       |
| Clipping platform | Distribution community management | Varies       |
| Total             |                                   | ~\$170/month |

### VSSL Build Checklist

- [ ] Framer page with single-column layout
- [ ] Wistia video embed, autoplay on mute
- [ ] Script follows 9-step structure: Hook, Agitate, Social Proof, Mechanism Flip, Authority, Borrowed Authority, Before/After, Urgency, CTA
- [ ] Before/after slider component below video
- [ ] Single CTA button (Skool join or TypeForm)

- ☐ Mobile-optimized (test on iPhone and Android)
- ☐ Load time under 3 seconds
- ☐ No navigation bar, no menu, no footer links
- ☐ Social proof counter visible above the fold

## Skool Community Setup Checklist

- ☐ Community name uses your unique mechanism branding (not generic)
- ☐ Custom welcome video recorded (NOT default Skool video)
- ☐ Onboarding sequence: Day 0 intro post, Day 1 first action, Day 3 check-in
- ☐ Module structure: Start Here, Quick Win, Core Program, Advanced, Ascension
- ☐ Timed gates: Day 7 (Module 2), Day 10 (Module 3), Day 14 (Module 4)
- ☐ Engagement-gated content for Level 2 members
- ☐ Transformation challenge with clear rules and prize
- ☐ Affiliate program enabled for member referrals
- ☐ Pricing: free 7-day trial to \$25-49/month rebill

## Part 8: Revenue Projection for Any Niche

Applying this exact funnel to ONE niche:

| Metric                      | Month 1 | Month 3  | Month 6  | Month 12  |
|-----------------------------|---------|----------|----------|-----------|
| Clipping army accounts      | 50      | 200      | 500      | 750       |
| VSSL monthly visits         | 2,000   | 10,000   | 25,000   | 43,000    |
| Skool members               | 50      | 300      | 800      | 1,500     |
| Skool MRR (\$49)            | \$2,450 | \$14,700 | \$39,200 | \$73,500  |
| High-ticket closes/month    | 0       | 2        | 5        | 10        |
| Coaching revenue (\$3K avg) | \$0     | \$6,000  | \$15,000 | \$30,000  |
| Total monthly               | \$2,450 | \$20,700 | \$54,200 | \$103,500 |

Running this across 3 niches simultaneously would multiply these numbers, though clipping infrastructure costs add up and management complexity increases.

## Part 9: Key Takeaways (Ranked by Impact)

1. Clipping army beats paid ads for organic reach. 750 accounts posting your content daily generates more organic impressions than any reasonable ad budget. This is the highest-ROI distribution play in this entire teardown.
2. New mechanism name is the highest-ROI copywriting move. "Ascension" instead of "looksmaxxing" turns a saturated market into a fresh opportunity. Do this for every niche.

3. The community IS lead gen for high-ticket. \$49/month Skool is not the real business. It is the qualifying funnel for \$3-5K coaching. The community pays for itself while filtering for high-intent buyers.
  4. Free trial to rebill solves the adoption vs. revenue tension. 7-day free trial gets people in the door. Rebill captures serious users. Default for all communities.
  5. Timed content unlocks prevent churn. Gate best content at day 14 (inside first billing cycle). Users feel they just got access to the real value.
  6. VSSL on Framer + Wistia costs under \$50/month. The entire sales engine runs on commodity tools. Margin is effectively 100% on digital delivery.
  7. Transformation challenge is a marketing flywheel. \$500 prize generates authentic content that becomes your best ad creative.
  8. Low engagement is a warning sign. 1.3% engagement means the community lacks daily activation. Onboarding and gamification are non-negotiable.
  9. Infrastructure for the entire operation is under \$200/month. The gap between cost (\$200/mo) and revenue (\$50-100K/mo) is one of the widest margins in any business.
  10. The before/after IS the product. In any niche where visible transformation exists, the creator's own transformation story is the highest-converting content asset.
- 

## Bonus: Apply This to Your Niche (Worksheet)

Your Niche: \_\_\_\_\_

Your Unique Mechanism Name (NOT the old category name):

\_\_\_\_\_

Why the old category name doesn't work for you:

\_\_\_\_\_

Your Clipping Army Strategy:

- Content platforms: \_\_\_\_\_
- Clipper recruitment method: \_\_\_\_\_
- Compensation model (per-clip / affiliate / hybrid): \_\_\_\_\_
- Target: \_\_\_\_ clipper pages in month 1, \_\_\_\_ by month 6

Your VSSL Hook (pain + time pressure):

\_\_\_\_\_

Your Community Structure:

- Platform: Skool / Circle / Mighty Networks / Custom
- Price: \$\_\_\_\_/month
- Free trial duration: \_\_\_\_ days

- Module release schedule: Day 7: \_\_\_\_, Day 10: \_\_\_\_, Day 14: \_\_\_\_

Your High-Ticket Offer:

- Price: \$\_\_\_\_\_

## What to Do Next

1. Choose your niche
2. Create your unique mechanism name
3. Build 10-20 content pieces on TikTok/Instagram
4. Recruit 10-20 initial clippers (DM people who already clip in your niche)
5. Build VSSL on Framer using the 9-step script
6. Launch Skool community with free 7-day trial
7. Set up timed content gates (day 7, 10, 14)
8. Add TypeForm high-ticket application after first 50 members
9. Run first transformation challenge at 100 members
10. Scale clipping army to 100+ accounts by month 3

This funnel works. The numbers are real. The infrastructure cost is under \$200/month. The margin is 99.8%.

Stop overthinking. Build it.
